

Evaluation

The redesign I did of the MCAST website was created based on the needs and preferences of the user person which emphasized simplicity visual clarity and accessibility. Overall with the new layout I have successfully improved navigation making it easier for students to locate important resources such as course details, event calendars and contact information.

What works well

One of the most effective elements of the redesign is the homepage structure. By separating each section Courses, About Us, Calendar, Contact with consistent card components and clear labels the users can instantly find what they're looking for. The use of the MCAST brand colors and logo also adds professionalism and aligns well with user expectations.

What needs improvement

Despite these strengths, there are areas that still need refining. Some users mentioned that the About Us page feels too text-heavy and lacks engagement. Adding visuals or short intro videos could enhance user interaction. Another flaw I had in my redesign is that some buttons like the Back to Home need consistent styling across all pages because some were rounded and others pointy. These issues I think could have avoided and for next time I will try to work on styling because that's the are where I fell a bit short.

Conclusion

I think the redesign really helped make the site easier to use and more organized, and it also looks more professional now. But I still think it could be better if I added more interactive content and made it more accessible for everyone. To conclude I think I did an ok job as you know coding is not my strongest area but I think I managed to deliver a decent website.
